### **'Gartner 13' UTM maker adds WAF**

*Cyberoam - "Visionary" in Magic Quadrant for UTM - chooses webScurity*

Minneapolis, MN – 7 MAR 2012 – webScurity Inc., pioneer of Web Application Firewall (WAF) solutions, announced release and initial sales of their webApp.**secure**<sup>™</sup> technology – private labeled as *Cyberoam WAF* – now offered on Cyberoam® Unified Threat Management (UTM) appliances.

Cyberoam WAF leapfrogs other UTM makers with a multi-purpose security appliance able to recognize and repel a broader range of cyber attacks at network and web-application layers.

Commenting on their collaboration, Wayne Ziebarth, President of webScurity said, "We commend and congratulate Cyberoam on being first-to-market with a multi-purpose appliance with WAF on board. While other UTM makers struggle to protect customer websites from SQL Injection, Cross-site Scripting and other application-layer exploits, Cyberoam with webApp.**secure** delivers. We were pleased to be selected as WAF provider of choice."

Recounting the project genesis, Ziebarth continued, "We offer a unique WAF design, built on a positive-protection model with no signature tables needed, able to recognize and repel 99+% of application-layer attacks, easy deployment with a single click, have a small footprint with few – if any – false positives and priced right for SMB subscription model."

He concluded, "Other UTM makers want to scratch the same itch. Their search ends here. We delivered. webApp.**secure** integrates with UTM hardware quickly and easily. It's been vetted by a major international appliance maker, where testing "wowed" engineering. It's a new revenue source for security sales personnel. It's the perfect software complement for the UTM-maker community. Now we'll all enjoy the rewards."

In recent UTM research, Gartner Inc. identified 13 global UTM makers. Cyberoam was among the 13 and was positioned in the visionary quadrant of the "Magic Quadrant for Unified Threat Management" report.

webScurity was founded in 2001 as a privately held, web application firewall creator and publisher based in the Twin Cities. Its client list includes financial institutions, higher education, State of Minnesota, private and public-sector organizations, hosting firms, web developers and UTM makers. webApp.**secure** has been protecting websites and applications since 2002.
