## **Customer Installation Report** **On-line Business Management Service**

*February 2004*

A pioneering on-line business management service for the mobile notary industry needing comprehensive security to protect its customer's sensitive information.

Because this innovative Web-based service allows mobile notaries to manage their businesses more efficiently, it holds a large amount of proprietary information. Information considered a competitive advantage by service subscribers.

Early on, the company recognized if it was to be successful, prospective customers would need to have complete confidence in the security of their data. Addressing application security in their security plan prior to the site's launch demonstrated high awareness of new threats and a commitment to take proactive measures.

"Market research showed the number one issue that would prevent widespread adoption of our service was the high level of concern about data privacy," says company president and co-founder. "We needed to make sure we were covering every security base to gain the confidence of our subscribers."

webApp.secure Professional Edition was the only cost-effective Web application security solution that provided the protection they needed. Its easy installation, minimal on-going administration requirements, and support for multiple platforms were all added bonuses.

Both the company and its growing subscriber base appreciate the peace of mind knowing webApp.secure is working 24x7 thwarting malicious activity.
